Installing Flutter

① First of all download flutter. (flutter.dev)

② Extract that in sub-folder in folder name.

②' & copied in "app" name folder.

③ Copied the bin path of flutter sdk and set in user environment variable.

④ Check in cmd that flutter is exist or not.

⑤ Run flutter doctor.

⑥ Install flutter extension in VS code then create a new project.

Pubspec. yaml :- is a configuration file that contains metadata about a flutter project. It's used to manage project dependencies, assets etc.

Project metadata: (Name, description, version and author)

Dependencies: List of library required by the project.

Assets: List of files (image, font) used by project.

Flutter Configuration: Setting for flutter, such as minimum android SDK version.

Dependencies: External libraries and framework and modules that an app relies on to function properly.
